

ONSIGHT PLATFORM MANAGER SIMPLIFIES AND CONTROLS DEPLOYMENTS.

Librestream provides a comprehensive management system that delivers centralized control over the entire Onsight platform. With strong security enforcement, privacy options, and bandwidth management, the Onsight system meets internal IT and security requirements.

ASSIGNED ADMINISTRATORS CAN ACCESS THE SECURE ONSIGHT PLATFORM MANAGER TOOL TO ENFORCE A BROAD RANGE OF POLICIES, REPORT ON USAGE, AND IMPLEMENT CUSTOM MESSAGES.

- Enforce enterprise security policies and distribute certificates
- Set maximum bandwidth usage limits
- Create custom media configurations to simplify operation
- Set privacy policies for control over image capture and recording
- Create groups of users to simplify management
- Identify users or groups that need 'Expert' or 'Field' user interfaces
- Manage Onsight deployment – add, delete, or set expiry dates for user licenses
- View dashboard of the user license pool for a quick overview
- Enable firewall traversal to simplify calls from the field
- Create custom branded messages
- Deploy as a secure hosted platform or on premise

ONSIGHT PLATFORM MANAGER HIGHLIGHTS:

SECURITY ENFORCEMENT

Multiple levels of security over access and content.

USAGE REPORTING

Track and identify usage across individuals and groups for adoption programs.

CUSTOM BRANDING

Brand your experience with custom messages.

PRIVACY CONTROL

Option to control which users or groups can save images and recordings.

TEAMLINK FIREWALL TRAVERSAL

Connect users across different networks with TeamLink.

BANDWIDTH CONTROL

Set maximum bandwidth limits to control usage and customize configurations.

THE ONSIGHT PLATFORM CAN BE DEPLOYED WITHIN A FULLY HOSTED, ON PREMISE, OR HYBRID MODEL.

SECURE ONSIGHT HOSTED SERVICES ALSO INCLUDE:

Onsight Session Initiation Protocol (SIP) Service

The Onsight SIP service provides an immediate, secure call connection option.

- Full security with ICSA certified firewall traversal equipment and encryption options
- High reliability with equipment redundancy and automated failover capabilities
- Fully managed service by Librestream to reduce IT workload
- Scales as your organization deploys across the enterprise

Onsight TeamLink Service

Ensures that your calls can operate through firewalls, providing connection across external networks such as customer facilities or supplier locations.

- Smart connection feature that automatically selects the best connectivity method available – SIP, HTTPS, HTTP
- Selection process is automatic and transparent to the user
- Support for SIP-TLS and AES encryption for end-to-end content security

Onsight Platform Manager (OPM)

Manage your Onsight deployment using OPM. Available as a fully secure hosted solution or on premise. The OPM OnPremises solution requires the following infrastructure:

- Operating System: Windows Server 2012 and higher.
- Web Server: IIS 8.0 or higher. SSL is Required.
- Disk space: Up to 120 MB required for initial installation of Onsight Platform Manager. Additional space is required for storage of software and configuration update packages and endpoint usage statistics. 2 GB is recommended.
- Microsoft .NET Framework: V4.5, 850 MB (if not already installed) required for x86, 2 GB for x64.
- MySQL DB: V5.7 or higher
- MySQL .NET Connector: ~20 MB required for installation.
- MySQL Connector/ODBC: ~10 MB required for installation.

Note: Onsight Teamlink and Guest Invite services are available within hosted OPM deployments. OPM OnPremises does not include these services.
